

capture keyworder

Innovative web-based keywording tool means images can be uploaded and quickly enriched with metadata by staff working remotely ...

- Multi-lingual keywording and online thesaurus.
- Easy to use with simple interfaces.
- Completely cross-platform (Macs and PCs).
- Handles latest IPTC and XMP standards.
- Batch upload and process images from anywhere.
- Ability to license thesaurus content.

Why choose Capture?

- We have been building sophisticated backoffice software for the image library industry since the 1990s, and have taken all that knowledge — and liaised with leading keywording experts — to create a brand new, web-based, keywording tool.

Who is Capture Keyworder for?

- The system can be used by small or large operations — as well as independent keyworders, working remotely or on site. It can be standalone, or part of the latest version of **Capture Office Online (COO)**.

What will Capture Keyworder do for you?

- Allow you to caption, categorise and keyword batches of images consistently and efficiently — in as many languages as you wish.
- Allow you to import your own keywords and create multiple hierarchical trees — or use thesaurus content that can be provided by Capture.
- Enable screens to be tailored to each user's individual requirements, in terms of fields displayed, field behaviour and image viewing.
- Ensure a professional workflow, including use of quality control tools.

Key features include:

- Completely web-based keywording system that allows the potential for staff to log on and work from anywhere using just a web browser.
- Speed features that enable keywords to be added quickly — and sent to an administrator's 'approval basket' if they are not recognised in the system taxonomy.
- Quality checking tools allow the user to pinpoint rapidly images lacking in certain keywords, and correct them if appropriate.
- Easy to use interfaces that can be personalised.
- Batch features to ingest multiple assets — that could include high-res images, pdfs, movies, text documents ... any kind of digital file.
- Fully multi-lingual, both in terms of staff using the system (simultaneously from different countries within the same system) and multi-lingual keywording and captioning, including a machine translator for main languages — or licensed keyword content.
- Thesaurus functionality.
- Cross platform — Windows, Macs, mixed network.
- Plug straight into public-facing Capture Web — or 3rd party — systems for marketing and selling images online.
- IPTC and XMP import and export.
- Import keywords and create as many hierarchical trees or categories as you require.
