## What's in the new Capture Web

- No screen refreshing; drag-and-drop lightboxes and basket; auto-zoom; content configurable - even add new pages yourself.
- Build, publish and sell virtual CDs, sets of images and features (words/pictures packages).
- Enhanced image processing allows images to display better on the web, while leaving the originals untouched.
- IPTC, XMP, CSV, and XML import/export, including full mappings and multiple configurations.
- Metatags for all pages are user-configurable.
- Each system comes with an in-built support area for on-line communication with the Capture team.
- Build a pricebook quickly using the Integrated PLUS (Picture Licensing Universal System) matrix.

Capture Web systems allow control over the behaviour of the site. The look and feel can be customised to fit your corporate image.

Capture Web handles a variety of file types, including high resolution images, video and sound clips, Word and PDF documents, Power Point presentations, and many more ...

## What is Capture Web?

Capture Web is our front-office system that is your gateway to the outside world. For a commercial picture agency or photographer, it can be a fully searchable e-commerce site for selling images to clients over the web. For an image production company, it's a shop window and channel to your agents. For an organisation it allows staff, or designers, to access a centralised pool of digital assets managed by a headquarters team.

Our systems are modular and come in packages to suit different needs. They can be standalone — or integrate with our web-based state-of-the-art backoffice product, **Capture Office Online (COO)**.
